

Complete React Hooks Course

Topic

React Hooks

1. React Hooks

Let us dive into React Hooks, a feature that transformed how we build components in React. Before hooks came along in React version sixteen point eight, developers had to use class components anytime they needed state or lifecycle methods. Functional components were considered stateless and limited. But hooks changed everything by letting us use state and other React features inside functional components, which are simpler and cleaner. Think of hooks as special functions that hook into React's i...
